

Safety Critical and High Reliability Embedded Systems Tools

Software Estimation Service

Need to estimate a software project but not ready to invest the time and money into a tool?

Using Galorath's SEER for Software solution, Phaedrus Systems will work with your experts to generate an estimate for your project.

Working on your site and remotely Phaedrus will create a SEER for Software file for your project that will allow you to

- See the effect of changes to the requirements on your delivery schedule, effort and cost

- Run "what if" scenarios, allowing you to explore multiple approaches to delivering against your requirements

Depending on the size and complexity of the project this will take between one and three days on site to create the initial project; further estimation runs will be made remotely

We will deliver

- Effort and schedule estimates at the 20, 50 and 80 percent confidence values
- Project cost
- A selection of our standard reports

You need to supply

- The Work Breakdown structure for the project
- Functional sizing for the development project
- Hourly rates for your team

Our service is run on a cost per day basis on site and includes three remote iterations of the project
